Education

Carleton University *Ottawa, ON*
Bachelor of Computer Science, Stream in Software Engineering *GPA: 3.9 / 4.0*

Experience

Full Stack Software Developer Co-op — **Ciena** *Ottawa, ON | Jan 2026 – May 2026*

- Engineered a **bidirectional CLI serialization engine** using **React and Redux** to automate provisioning across **large scale, distributed environments** and 15+ parameters via Bitbucket API integrations.
- Engineered a **Python CLI to synchronize** manifests across 60+ microservices using DFS-based cycle detection on a JSON inheritance graph, reducing manual review time via automated HTML diff reporting.
- Built **real-time observability dashboards** using **WebSockets** and **Redux** for memory profiling and heap diagnostics across **distributed service** domains, ensuring **reliable and maintainable** system operations

Software Developer Co-op — **Ericsson** *Ottawa, ON | May 2023 – Aug 2024*

- **Developed REST APIs** with backend engineers, extending the Traffic View component to support Mbps/Sub units and reducing network configuration errors at the frontend-backend integration boundary.
- **Improved software release reliability** by authoring frontend test cases, resolving critical UI defects, and conducting peer code reviews via **Gerrit** across multiple Agile sprints.
- **Built a high-fidelity Structure Editing vector tool** using **GoJS** and **React**, enabling manual creation of floorplan structures with frequency-dependent material attenuation configuration.

Software Developer Co-op — **Ciena** *Ottawa, ON | Sep 2022 – Dec 2022*

- Built scalable **UI components and RESTful API** interfaces for MCP network applications with **TypeScript** and **Ember.js**, improving dashboard load performance by 15% and reducing issue resolution time.
- **Automated test suites and CI/CD workflows**, accelerating deployment cycles and improving release reliability across distributed network and services.

Projects

AI Test Coverage Analyzer (Ciena Hackathon) | *Python, Google ADK, Gemini 2.5, Pydantic* *April 2026*

- Built a **multi-agent AI backend pipeline** (**Google ADK, Gemini 2.5 Flash, asyncio**) with concurrent scheduling and **Pydantic** schema enforcement to audit test coverage across 500+ files, reducing manual review by 4–6 hrs/release.
- Engineered a **hybrid LLM extraction layer** combining deterministic Pandas ingestion with parallel LLM calls, enforcing **data validation and critical evaluation** of AI-assisted outputs via **Pydantic** models.

Smart Appetite Manager (1st Place uOttaHack8) | *Python, Agentic AI, Solace Agent Mesh* *Jan 2026*

- Engineered a hierarchical **agentic AI** platform (**Python, Solace Agent Mesh, Javascript**) with 4 orchestrators and 13 specialized agents across inventory, recipe, and shopping domains in a **36-hour sprint.**
- Built a **multi-step LLM enrichment pipeline** using chained text filtering, categorization, and vision-model extraction, **leveraging AI to synthesize information** and reduce noisy API results from 77 to 15 relevant products per query.

Safe Walkie (1st Place TechNolHack2025) | *Python, React, Flask, RabbitMQ, Mapbox* *Oct 2025*

- Architected an event-driven safety app **(Flask, RabbitMQ, React, Mapbox)** with async message delivery for SOS alerts and live guardian notifications, integrating **Web Speech API** for voice-triggered routing across concurrent sessions.

Technical Skills

Languages: Python, JavaScript/TypeScript, Java, C++, SQL, HTML/CSS

Frameworks & Libraries: React, Redux Toolkit, Node.js, Flask, Material-UI, Ember.js, Pandas, Pydantic, Google ADK

Developer Tools: Git, CI/CD (GitLab CI), RabbitMQ, WebSocket, REST APIs, Ubuntu, Valgrind, GDB, Jenkins

Cloud & Platforms: Google Cloud Platform (GCP), Bitbucket Server, Solace PubSub+, AI/LLM APIs (Gemini, GPT-4o)
